If the ratio is greater than 0.5, the majority of a scheme's assets are financed using debt. It gives an indication of the potential risks a scheme faces in terms of its level of debt.</p>

RG PARAGRAPH NUMBER

46.74 What does interest cover mean and how can investors use the interest cover ratio to assess the scheme's ability to meet its interest payments?

Due to a change in interpretation of accounting standards, distributions are no longer included in the calculation of earnings. Earnings are reflected in the EBITDA and adjusted EBITDA.

The interest cover ratio is a measurement of the number of times a scheme could make its interest payments with its earnings before interest and taxes.

A high interest cover ratio means that a scheme is easily able to meet its interest obligations from profits. Similarly, a low value for the interest cover ratio means that a scheme is potentially in danger of not being able to meet its interest obligations.
